

Economic Development of Hunting Units in Csongrád County

HORVÁTH Sándor – JUHÁSZ Lenke
University of West Hungary Faculty of Forestry
Institute of Forest Resources and Rural Development

The main target of our pilot project is the economical analysis of whole game management sector in Csongrád County. It is in initial phase, already we are collecting the main datas (annual economical review of 2009/2010, annual review of game management and hunting activities of 2009/2010, questionnaire of working attitudes and situations) from hunting units and hunting officials.

The analysis is supporting the following research questions:

- Investigation of economical datas of Y2009/2010, from the annual economical reviews of hunting units (gross income, income of member-fees, income of economical activities, wages-costs, material-costs, outhers-costs, profitability, taxes).
- Analysis of answers of questionnaire for hunting officials (foreign language-knowledge, present qualifications and planned special qualifications, wage-conditions, living situations and plans).
- Data analysis of National Pension Insurance (wages, superannuation tax, employment term, short-time working, etc.).
- Data analysis of National Tax and Customs Office (wages, corporate tax, income- and cost-analysis).

The datas are collected from end of 2011 until mid of 2012. The first results are available from March 2012.
